Novel substantially purified canine cyclooxygenase 1 or 2 protein, useful for identifying drugs that can reduce inflammation in dogs, and screening selective inhibitors of cyclooxygenase-2 protein.

Disclosure; Page 94-97; 122pp; English.

The invention relates to genes that encode canine cyclooxygenase (COX)-1 or COX-2 proteins. The COX proteins, especially COX-2 is useful for diagnosing or prognosing a COX-2 related condition in a dog. COX-2 or its fragment is useful for identifying a test material which has the ability to inhibit, suppress, modulate, or maintain canine COX-2 activity. The COX-1 and COX-2 polynucleotides are useful for determining an association between a polymorphism and a trait. COX-2 cDNA molecules and methods provided are also useful for diagnosing or prognosing COX-2 related condition such as arthritis, cancer, neoplasia, inflammation or central nervous system disorder in a dog. The present sequence represents a human COX-2 protein encoding DNA

(EPIG-) EPIGENESIS PHARM INC

JW, Li Y, Tang Ļ Sandrasagra A, Ŀ, Shahabuddin Katz S; Ħ Pabalan ŗ Aguilar

Pharmaceutical composition for treating ailments associated with imporespiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid ubiquinone. impaired or

The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5 or 3 end genomic flanking regions, 5 or 3 and genomic flanking regions, 5 and 3 intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or compositions of genes encoding a polypeptide associated with lung and/or constant airway dysfunction and a second active agent comprising an artial flammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, and creating a composition may have a cuse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antisense genether prophylactic or therapeutic respiratory effect of antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO Sequence 3387 BP; 1010 A; 712 C; 633 G; 1032 T; 0 U; 0 Other; Disclosure; SEQ ID NO 12051; 872pp; English. at ftp.wipo.int/pub/published_pct_sequences

The present invention describes a new composition comprising an antisense coligonucleotide (ON) with low adenosine (up to 15%), which targets conucleic acids involved in bronchoconstriction, allergies, and/or coinflammation. The ON can have antiinflammatory, antialtergie, and/or coinflammatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, coinflammation, including lung disease and diseases whose secondary cimpaired alively including lung disease and diseases secondary ce.g. ischaemic conditions, pulmonary vasconstriction, allergies, asthma, cimpeded respiration, respiratory distrass syndrome, pain, cystic cimpeded respiration, respiratory distrass syndrome, pain, cystic cimpeded respiration, respiratory distrass syndrome, pain, cystic cimpeded respiration, respiratory distrass syndrome, pain, cystic carcinomary disease (COPD), and cancers such as leukaemias, lymphomas, coarcinomas, and cancers which may metastasise to the lungs, including content and prostate cancer. The reduction of the adenosine content of the contents and prostate cancer. The account of the adenosine receptors causing bronchoconstriction and inflammation. AAA3233 to AAA35312 represent the contents of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account of the account o

                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO.1 to 2815, and then the last 18 sequences are also called SEQ ID NO.11 to 185, but the sequences differ from the previously named sequences. SEQ ID NO.11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence

immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or surfactant hypoproduction which are associated with a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, activating peptide factors and transmitters, transcription factors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nyce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Low adenosine antisense oligonucleotide; phosphorothicate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human low adenosine antisense oligonucleotide related sequence #2684
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-MAR-2001
                                                                       pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification o
                                                                                                                                                 condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory discress syndrome (RDS), pain, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뮵
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                              immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed
                                                                                                                                                                                                                                                                                                                                                       5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiastematic, hypotensive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; lung; adenosine sensitivity; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or

                     The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ABV7873-ABV78116 and ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a patient, for manufacture of a medicament for treating hypoxia-regulated conditions, and for regulating tumourigenesis, angiogenesis, appotosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-DEC-2000;

The present invention relates to methods and compositions for detecting an anglogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence at least 80% identical to any of the anglogenesis-associated human polymucleotide sequences given in the specification. These anglogenesis-associated polymucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing
                                                                                                                                                                                                                                  Detecting angiogenesis-associated transcript in a cell for diagnosing treating cancer by contacting a sample with a polynucleotide that exhibits changes in expression level as a function of time in tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABX08805
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14-FEB-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      angiogenesis-associated disease; cancer; cytostatic; gene therapy; gene;

angiogenesis. The method and the polynucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynucleotide sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polynucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation. ABX(8739-ABX)8853 represent angiogenesis-associated polynucleotide

The present sequence is that of cDNA encoding human cyclooxygenase 2 (COX -2). A claimed vector for use in enhancing wound healing comprises a promoter linked to a COX expression cassette, especially encoding a COX-2 gene product. The vector is used in claimed methods for enhancing wound healing and for enhancing wound healing following orthopaedic procedures. A claimed method for treating pathological heterotopic ossification, especially fibrodysplasia ossificans progressiva following hip

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                             identified by microarray gene expression analysis as being under-
expressed in breast cancers in comparison to healthy tissue. The gene was
identified as PTGS2 encoding prostaglandin endoperoxide synthase 2. This
was previously reported to be undetectable in mammary invasive carcinomas
and was more likely detected in ductal carcinomas in situ. PTGS2 was down
regulated in all 13 breast cancer cell lines/tissue samples examined. It
is 1 of 19 (see ACF79921-39) BCSGs of the invention that are
differentially expressed in breast cancer cell lines and breast cancer
                                                                                                                                                                                                                                                                                                                                                   Claim 6; Page 85-87; 143pp; English
                                                                                                                                                                                                                                                                                                                                                                                                           Detecting breast cancer in a subject comprises contacting a biological sample with an agent that binds to a polynucleotide or polypeptide of breast-cancer specific gene (BCSG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ACF79931;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ACF79931 standard; cDNA;
      tissue samples as compared to control
                                                                                                                                                                                                                                                                                     The present sequence is that of a breast cancer specific gene (BCSG)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              samples. The polynucleotides transcribed from the BCSGs and the polypeptides encoded by the BCSGs are designated as breast cancer specific markers (BCSM). The invention provides a method for detection of breast cancer by measuring expression levels of BCSGs, and in particular the level of polynucleotides transcribed from and polypeptides encoded by the BCSGs. A pharmaceutical composition for the transment of breast cancer comprises a BCSM, an antibody directed against a BCSM, a vaccine generated using a BCSM, or an agent that modulates an expression level of a BCSG or an activity of a BCSM. A biochip for diagnosing breast cancer or screening agents that inhibit breast cancer comprises a BCSG or BCSM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 4465 BP; 1372 A; 839 C; 813 G; 1441 T; 0 U; 0 Other;

The combination is useful in detecting changes in expression of genes encoding proteins that are associated with senescence and in diagnosing, staging, treating, or monitoring the progression or treatment of subjects with proliferative diseases such as cancer e.g. adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, cancer of the adrenal gland, bladder, bone, bone marrow, brain, breast, cervix, colon, oesophagus, gall bladder, bone, ganglia, heart, kidney, liver, lung, muscle, ovary, pancreas, parathyroid gland, penis, prostate, salivary glands, skin, small intestine, spleen, stomach, testis, thymus, thyroid and uterus. The present sequence represents cDNA of genes that are downregulated in senescent cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 4496 BP; 1382 A; 839 C; 816 G; 1459 T; 0 U; 0 Other;

GENERAL INFORMATION:
APPLICANT: MERCK FROSST CANADA & CO.
APPLICANT: O'NEILL, GARY P.
APPLICANT: MANCINI, JOSEPH A.
TITLE OF INVENTION: HIGH LEVEL EXPRESSION
TITLE OF INVENTION: CYCLOOXYGENASE-2
                                                                                                                                                                                                              Sequence 19, Application US/08930589A Patent No. 6107087
                                                                 CORRESPONDENCE ADDRESS:

Sequence 3, Application US/08487753
Patent No. 5807733
GENERAL INFORMATION:
APPLICANT: Young, Donald A.
APPLICANT: Winn, Michael K.
APPLICANT: Winn, Virginia D.
TITLE OF INVENTION: MAMMALIAN PRO-
TITLE OF INVENTION: FUSION PROTEI
NUMBER OF SEQUENCES: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-487-753-3
